

Order Picker Attachments

Order Picker Attachments - Order preparation operation or also called order picking as it is more normally known is a process used in warehouse operations and comprises personnel known as order pickers. The order picker's task is to take and collect articles in certain quantities so as to accomplish the customer's orders before shipment. Order picking is an easy warehousing method. The effectiveness in which this particular task is accomplished can be directly connected to the productivity of a supply chain. Hence, order picking is one of the most controlled logistic methods. Order picking falls in the category of the warehouse management system.

There are some particular types of order picking. The main kinds include: wave picking method, pick to box method, picker to part method or piece picking, sorting systems method and zone picking method.

The pick to box method involves the order picker filling the box with the stuff from her or his station. The box then moves to the other picking locations until the customer order is finish. In this technique, there is no movement of the order picker employees. In the wave picking method, the order pickers move around so as to gather the required things for some orders. The picker to part method or piece picking is similar where the order pickers or picker move so as to gather the items required but for one order only.

In the sorting systems method, there is no movement of the order picking employees. Instead, the products are delivered to her or him via an automated system like for example a conveyor system or an automatic storage. In the zone picking method, every order picker is assigned to one specific zone. They are responsible for just realizing order picking within this specific area.
