

## Barrel Clamp

Barrel Clamps - A Barrel Clamp is really a hydraulic or mechanical attachment intended for a lift truck. It could be used so as to clutch the item you would like to transfer with the lift truck and is often used for handling barrels, kegs and paper rolls. A few designs of barrel clamp accessories also have a rotate function. For example, the revolving function permits the one operating the forklift to be able to slot in a vertically stored paper into the horizontal intake of a printing press.
