

Drum Clamps

Drum Clamp - Forklifts are really utilized to move, lift and store products placed on pallets. For companies that make use of drums, they normally require an attachment to deal with lifting, moving and storing them. There are some different attachments which a company could utilize for all of your drum moving, storing and lifting needs. These attachments are specially meant so as to deal with drum containers - thus there is no risk of damage to the product or drum container whenever they are lifted, stored or moved.

Drum Positioner And Grab

The drum positioner can be used to load and unload drums off of vehicles, racks, and drum stands. These are offered in three and four tine models. This particular attachment is fully mechanical, thus allowing the one operating it to be able to operate all from the comfort of the lift truck seat. Able to move large and extra large plastic drums, steel, its capacity is 210 liters. This particular attachment is used for drum pyramid stacking.

The drum grab can be mounted to the forks, with a designed purpose of handling metal drums which have rolling hoops. Although the original reason for the design was to deal with steel drums with rolling hoops, the drum grab can help accommodate plastic drums too. Drum capacity maximum is 210 liters for steel drums with rolling hoops and 220 liters for plastic drums.

The Rotator

The drum rotator is one more forklift accessory that mounts onto the forks themselves. Their objective is to pick up the drum and turn it upside down. The drum is clamped into the drum rotator with a clamp which fits around the middle of the drum. The rotation is done by either a continuous loop chain or a crank handle. The crank handle is intended for operations which occur below shoulder level. For operations which must take place over shoulder level, the continual loop chain will be utilized.

The drum tines are simple fork or carriage mounted attachments. They are utilized for unstacking and stacking 210-liter steel drums. Stacking requires nothing intricate, merely simple horizontal positioning of the drums. The carriage-mounted accessories lessen the load center of the drums.

Automatic Tongs

Drum tongs are available in automatic and semi-automatic models. They are for use in the tight head or open topped steel drum kinds. The drum forceps can be connected in several ways to the lift truck. One method is to connect them under a fork-mounted hook. Another way is to attach them to a carriage mounted jib or a fork-mounted jib. Either the automatic and semi-automatic have a drum capacity of 210 liters. With the automatic, there is no requirement for the person operating it to ever leave the seat of the lift truck.

Rim Grip Handler

The Rip Grip Drum Handler is the best choice for forklift attachments, when there is a need to store drums with inadequate area accessible. This attachment could be used on either one hundred twenty liter and two hundred ten liter drums. The Rim Grip Handler works by using metal jaws to be able to grab the rim of the drum. It picks the drum up and puts it down without requiring any room between the drums. The typical model in the business is a zinc-plated handler, though, this accessory comes accessible in stainless steel for the food and drink market.
