

## Carriage Rollers

Carriage Rollers - Carriage rollers are specially designed bearings that are utilized on lift masts in order to help them function within tough environmental conditions. Lift masts are normally subjected to shocks, oscillations, vibrations and high dynamic and static loads. This apparatus is frequently exposed to environmental influences such as cold, heat, dust, moisture, contamination and aggressive ambient air. Hence, the guidance arrangements of lift masts have to be specifically robust and have a specific high load carrying capability.

Carriage rollers have been created as the answer for operating in different environmental surroundings. These bearings are the solution where the guidance arrangements of the lift masts need to be economical and maintain operational security while having the ability to deal with a particularly high load carrying capacity.
